TECHNOSOFT
MOTION TECHNOLOGY
Technosoft is a leading DSP Motion Control technology company, specialized in the design and manufacture of motion control products and custom motion systems. Technosoft’s focus on innovative design, using the latest control technology has culminated in the realization of MotionChip™ - a dedicated solution for motion control, embedded today in a broad range of intelligent servo drive products. Technosoft products use modularity both at hardware and software levels. This provides highly flexible and adaptable dedicated solutions that can easily be prototyped to meet specific OEM needs. The automotive, medical, robotics, textile and factory automation industries have effectively used Technosoft’s motor control expertise in the fast development of specific products for highly demanding applications.

**An Innovative Company**

Technosoft Intelligent Servo Drives belong to a new family of fully digital servo drives with embedded intelligence, based on the latest DSP controller technology. These state-of-the-art intelligent drives offer features usually found only in high-power servo-amplifiers:

- Software configurability to drive AC or DC brushless, DC brush or step motors
- Multi-mode motion operation: contouring, profiling, gearing, electronic camming
- Stand-alone or multi-axis configuration
- Typical feedback devices: tacho generators, incremental encoders, digital or linear Halls
- Distributed control over CAN, CANopen, EtherCAT, Ethernet

**Compact and cost effective intelligent drives**

- **All in one**: controller and drive in one unit
- **One for all**: same drive for DC, step, brushless or linear motors
- **Distributed intelligence** with:
  - CANopen
  - EtherCAT
  - TMLCAN
  - Ethernet

- **Advanced digital motion control with MotionChip™ DSP technology**:
  - PVT, S-curves, electronic camming, 3D motion commands
- **Easy implementation** with various motion libraries for PC / PLC
- **Graphical programming** with EasyMotion Studio

**Your Benefits**

**Intelligent Drives and Motors**

Technosoft products use modularity both at hardware and software levels. This provides highly flexible and adaptable dedicated solutions that can easily be prototyped to meet specific OEM needs.
MEDICAL
- Respiratory devices
- Surgical instruments & robots
- Clinical Diagnosis
- Dosing machines
- Liquid Handling System
- Ophthalmology equipment
- X-Ray equipment
- Biomechatronics
- Centrifugal pumps

Instrumentation & Optics
- Digital microscopes
- Laser measuring systems
- Aerial view cameras
- Photometry
- Lens shaping and polishing
- Auto focus & auto zooming

Research Laboratories
- Analysis equipment
- Pipetting
- Laboratory automation

Industrial Equipment
- Elevators
- Elevator doors
- Solar cells
- Hydraulic pumps
- Solar trackers
- Photovoltaic panels
**Factory Automation**

- Pick and place robots
- Cartesian robots
- Welding robots
- Printing equipment
- Bonding systems
- Laser cutting
- Laser marking
- Wafer inspection

**Robotics**

- Robots and cobots
- Exoskeletons
- Grippers
- Automated guided vehicles (AGVs)
- Warehouse automation

**Semiconductor Equipment**

- Flexible automation
- Atomic layer etching
- Trim and form
- Pick and place handler

**Packaging**

- Bottling machines
- Labeling machines
- Gluing machines
- Package printing
- Material dosing

**iPO2401 MX CAN/CAT**

*Intelligent Servo Drives*  
24 V, 1 A  
25 W

- Suitable for rotary, linear brushless, DC brush and step motors  
- 12-24 V power supply (motor and logic)  
- 1 A continuous, 1 A peak current  
- 5 Digital inputs, 3 digital outputs and 2 analog inputs  
- High resolution stepper control up to 512 microsteps / step  
- Quadrature and Sin / Cos encoders, Hall sensors or linear Halls  
- RS-232 and CAN (TMLCAN and CANopen protocols)  
- EtherCAT extension with CoE protocol  
- Size: 47 x 19 x 8 mm (CAN model) / 50 x 20 x 15 mm (CAT model)

**Ordering information:**  
P024.300.E101 — iPOS2401 MX-CAN; 24 V, 0.9 A, pin-plug, encoder, CAN  
P024.200.E121 — iPOS2401 MX-CAT Combo, 24 V, 1 A, EtherCAT

**iPOS3602 VX / iPOS3602 MX**

*Intelligent Servo Drives*  
36 V, 2 A  
75 W

- Suitable for rotary, linear brushless, DC brush and step motors  
- 12-36 V power supply (motor and logic)  
- 2 A continuous, 3.2 A peak current  
- Digital inputs (5), digital outputs (4 VX model / 3 MX model) and analog inputs (2 VX model / 1 MX model)  
- High resolution stepper control up to 512 microsteps / step  
- Quadrature and Sin / Cos encoders, Hall sensors or linear Halls  
- RS-232 and CAN (TMLCAN and CANopen protocols)  
- Optional EtherCAT extension with CoE protocol  
- Mounting: vertical (VX model), horizontal (MX model)  
- Size: 56 x 29 x 7 mm (VX model) / 55 x 26 x 13 mm (MX model)

**Ordering information:**

**iPOS3604 VX / iPOS3604 MX**

*Intelligent Servo Drives*  
36 V, 4 A  
144 W

- Suitable for rotary, linear brushless, DC brush and step motors  
- 12-36 V power supply (motor and logic)  
- 4 A continuous, 10 A peak current  
- Digital inputs (5), digital outputs (4 VX model / 3 MX model) and analog inputs (2 VX model / 1 MX model)  
- High resolution stepper control up to 512 microsteps / step  
- Quadrature and Sin / Cos encoders, Hall sensors or linear Halls  
- RS-232 and CAN (TMLCAN and CANopen protocols)  
- Optional EtherCAT extension with CoE protocol  
- Mounting: vertical (VX model), horizontal (MX model)

**4/6 x144 W**

- Suitable for DC brushed, brushless, step or linear motors
- Can be supplied from1 to 6 axis of any combination of iPOS3602 and iPOS3604
- iPOS360x SX systems with up to 4 axis for RS232, TMLCAN, CANopen or Ethernet
- iPOS360x SY systems with up to 6 axis for RS232, TMLCAN, CANopen or EtherCAT
- 12-36 V power supply (motor and logic separately)
- 2A continuous / 3.3A peak, respectively 4A continuous / 10A peak per axis
- Size: 100 x 98 x 36 mm (4x) / 160 x 122 x 36 mm (6x)

### iMOT23xS
**Intelligent Step Motors**
- Fully programmable intelligent step motors due to TML instruction set
- 12-48 V motor power supply, 12-36 V logic supply
- 3 motor sizes offering from 1 to 1.8 Nm
- Minimal power consumption due to true servo closed loop operation
- Integrated position sensor with 4096 counts/rotation
- Programmable digital I/Os and analogue inputs
- RS-232 and CAN (optional EtherCAT and Ethernet communication busses)

**Ordering information:**
- P036.222.E120  iMOT232S XM-CAN Intelligent Step Motor, CAN
- P036.223.E120  iMOT233S XM-CAN Intelligent Step Motor, CAN
Through high level software programmability, Technosoft drives and motors offer extended flexibility and versatility resulting in easy-to-use solutions for a variety of motion control applications.

**Single-Axis Servo, Stand Alone or Host Controlled**

The drives can run a locally stored TML program, in stand-alone mode or they can be programmed and controlled from a host controller system, via a communication channel: RS-232, RS-485, EtherCAT or CAN-bus (with CAN / CANopen drive versions). ‘Immediate’ on-line commands and TML instructions (loading and running of programs, setup of parameters, queries on drive status) can be sent and executed.

**Events and Interrupts Handling**

Programmable events on Technosoft drives, combined with the TML specific interrupts structure, allow you to simultaneously handle different tasks as: protections, time intervals, I/O status or capture, control error or status variable values, besides the main program’s TML motion sequences.

**Multiple-Axis Coordination**

In distributed multiple-axes structures, a host can provide data points to axes in the network (EtherCAT, CAN, CANopen or RS485). Also, locally stored motion profiles can be executed at the host’s command, or coordinated via on-board I/Os. Moreover, any axis can request and receive information from other axes in the system, via specific TML commands.

**Multi-dimensional Paths** (linear interpolation & vector mode)

All Technosoft drives, together with the multi-axis controller TMC-3D, can execute 2D, 2°D or 3D coordinated moves. The trajectories are defined through a series of linear or circular segments. Optionally, for each segment a vector speed and acceleration can be specified. TMC-3D splits each segment into PVT points and sends these points to the slaves. On receiving the PVT points, the slaves rebuild their paths using 3rd order interpolation.

**Multiple I/O Treatment / Multiple-Axis I/O Handshake**

PLC-specific functionalities of Technosoft drives allow you to configure and use the I/O resources of the drive. Also the I/Os available on the drives allow you to create handshake structures between the axes, by appropriate TML programming. Activation of specific axes, completion of programmed tasks on axes, chaining of actions from one axis to another can easily be implemented, further increasing the flexibility of the motion system configuration.
Technosoft drives and motors allow you to program their built-in motion controller in order to set different motion modes and trajectories — internal and external — depending on the way the motion reference is generated.

Trapezoidal Speed Profiles
Program a speed profile with a trapezoidal shape of the speed, due to a limited acceleration.

Trapezoidal Position Profiles
Program a position profile due to a limited acceleration. You must specify the position you want to reach, the acceleration / deceleration rate and the travel speed. The built-in reference generator computes the position trajectory, which results in a trapezoidal or triangular speed profile.

On-the-fly Change of Motion Parameters
Almost any motor mode can be switched to another mode on the fly. This feature is especially useful for position/speed control applications, where the target reference is provided by the internal trajectory generator using position / speed profile modes, position / speed contouring modes, electronic gearing, electronic cam and stop modes.

S-curve Profiles
Program a position profile with an S-curve shape of the speed. This shape is due to the jerk limitation, which leads to a trapezoidal or triangular profile of the acceleration, and to an S-curve speed profile.

PT Mode
Programs a positioning path described through a series of points where each point specifies the desired Position and Time (the PT data). Between points, the built-in reference generator performs a linear interpolation.

PVT Mode
Programs a positioning path described through a series of points. Each point specifies the desired Position, Velocity and Time (the PVT data). Between points, the built-in reference generator performs a 3rd order interpolation.

Electronic Gearing
Sets the drive as a master or a slave for electronic gearing mode. When set as a master, the drive sends its position via a multi-axis communication channel, like the CANbus. The master sends either the load position or the position reference once, at each slow loop sampling time interval. When set as a slave, the drive follows the master’s position with a programmable ratio. The slave can also superpose the electronic gearing movement with another mode.

Electronic Camming
Similarly to the electronic gearing mode, the drives can be programmed to implement electronic camming. When set as master, the drive sends its position via a multi-axis communication channel. The master sends either the load position or the position reference once at each slow loop sampling time interval. When set as slave, a drive executes a cam profile function of the master position.

External Mode
Programs the drives to work with an external reference provided by another device. There are 3 types of external references: analogue, digital and online.

Additive Position Profile
On-the-fly end-point modification during drive’s execution of the motion profile. While a motor is executes a position profile, a new target position can be specified by adding a new position increment to the ‘old’ target position.

Fast Position Capture
Lets you store motor/load positions based on the transition of a digital input, allowing close correlation of axis positions to external events.

Homing
Is a sequence of motions, usually executed after power-on, through which the load is positioned into a well-defined point.

Test Mode
Sets the drives in a special test configuration setup. This configuration is supposed to be used during drive setup.
For a fast and easy way of learning how to use our intelligent servo drives, Technosoft offers starter kits for each product. These evaluation kits are ready-to-run packages that include the complete hardware and software you need in order to evaluate and develop your motion applications.

Starter kits include:

- The EasyMotion Studio software
- The intelligent drive of your choice
- A motor (brushless or stepper)
- An I/O board
- A collection of application notes

EasyMotion Studio

EasyMotion Studio gives you access to the performance of the Technosoft Motion Language (TML). The TML is a high-level set of instructions that can be used to configure and parameterize the MotionChip-based drives, and to execute advanced motion operations. EasyMotion Studio platform simplifies the setup and motion programming, as well as the development and graphical evaluation of your motion sequences.

With the EasyMotion Studio, you can:
- Define the system architecture
- Identify the parameters of the motor, sensor or load
- Tune and adjust digital control loops
- Define motion sequences, import G-code files (for TMC-3D)
- Build the application in TML for single or multi-axis
- Analyze and evaluate the dynamic behavior of your motion system through real-time data acquisition

Motion Libraries for PCs and PLCs

Motion Libraries are collections of functions allowing you to implement motion control applications on a PC computer or PLC, in order to run Technosoft intelligent drives based on the MotionChip™ technology. They enable you to communicate with a drive, set up its parameters, interrogate about its status, send motion commands, define motion events, test input and set output port statuses.

- PC Motion Libraries running under Windows: C/C++, C#, Visual Basic, Delphi Pascal and LabVIEW
- PC Motion Libraries running under Linux: C/C++
- PLC Motion Libraries for Siemens, OMRON and B&R: TML_LIB_S7, TML_LIB_CJ1 and TML_LIB_x20

Our experience
Since over 20 years Technosoft has delivered motion solutions in various fields of the industry. This experience has matured into the continuous improvement of the performance and robustness of our products.

Our commitment
Satisfy our customer’s expectations by mastering all the technological aspects related to digital motion control solutions.

Your satisfaction
Technosoft is certified according to the ISO 9001:2015 standard. This rigorous management system and continuous improvement of the processes reinforce every day our competitiveness and the satisfaction of our customers.

Industrial Applications
Technosoft’s emphasis on modularity at both hardware and software levels allows us to create highly flexible and adaptable dedicated solutions that can easily and rapidly be prototyped to meet your specific needs. Customers from various industries requiring a wide range of motion control products and systems for specialized applications have effectively utilized Technosoft’s expertise for:

- **Packaging**: intelligent solutions for distributed control
- **Medical**: laboratory automation, life support devices
- **Textile**: yarn feeder, high dynamic controls
- **Automotive**: sensorless vector control in fuel cell applications
- **Machine tools**: electronic screw drivers and nut runners
- **Semiconductor industry**: wafer handling and processing

Custom Solutions
We combine advanced theoretical and modelling know-how in the field of electrical machines and digital motion control implementation on the latest Digital Signal Processor (DSP) technology. Our multidisciplinary engineering team includes experts in the various fields of motion control and mechatronics, such as:

- Intelligent and distributed motion control
- Digital control electronics
- Specific motor control algorithms
- Sensorless vector control
- Digital, analog and power electronic design

Technosoft on-demand solutions are particularly suited for:

- Specific custom integration
- Digital motor control software modules
- Intelligent modular motor controllers
